

ACKNOWLEDGEMENT

A project of this nature really calls for intellectual nourishment, professional, encouragement, patience and a positive attitude.

It is often said, “Whatever you do, whatever efforts you put in, whatever you achieve, you should not forget the people who stood beside you every stage of your life”.

We would like to thank the college management and express our sincere gratitude to Director/Principal of PESIT-BSC **Dr. J Surya Prasad**, have given me the opportunity for the completion of this project.

We would like to express our gratitude to **Dr. Sandesh B J**, H.O.D Computer Science and Engineering Department, for his encouraging support and guidance in carrying on the project.

We wish to specially acknowledge **Prof. Shubha Raj K B** Project guide for guiding me in completing our project successfully.

We thank our parents and friends who have directly or indirectly helped us to complete this project.

ABSTRACT

Air travel is one of the most used means of travel in the world. Hence, Airports play a major job in maintaining the flow of the flights and security of each passenger on the flight. As airways are used by many people, it is important to keep a track of the data of each passenger and also keep track of data regarding other aspects as well.

Our objective is to store the data from various domains of the airport like airlines, passengers, tickets, employees and represent all the necessary in a single interface and in the simplest format to understand. This creates a centralized system within the airport. Hence, making data storing and data representation easier. It also helps us in tracking the airlines and passengers in a more efficient way.
